Git
REST APIs (GraphQL)

CAREER OBJECTIVE

Java developer who specializes in building scalable enterprise applications using J2EE. Through a focus on priority management and meeting deadlines I've had the ability to create lasting impact for users of software I've worked on.

WORK EXPERIENCE

J2EE Developer

Allstate / February 2017 - current / New York NY

- Utilized J2EE design patterns to create internal applications to automate business logic which prioritized urgent customer service requests, improving retention rate by 7%
- Designed and developed APIs that processed streaming data to power customer recommendation engines which resulted in \$1.1M in incremental annual revenue
- Led the routing of control from web services to Java services using the Camel Framework which reduced development costs by \$150,000 annually
- Developed Java Bean components to implement business logic that streamlined an internal application by 14%

Java Developer

Atlassian / April 2014 - January 2017 / Washington DC

- Built web services with J2EE that were used by the customer-facing app to improve the time on page for the average user by 2 minutes
- Built extensive test coverage for all new features which reduced the number of customer complaints by 7%
- Responsible for API design and development of RESTful Services for the enterprise product in the business
- Worked within an agile team and helped prioritize and scope feature requests to ensure that the biggest impact features were worked on first
